

GPS Fleet Tracking, Two-way Satellite, Real-time, Global Coverage

U.S. Department of Homeland Security Tracks Fleet via Satellite

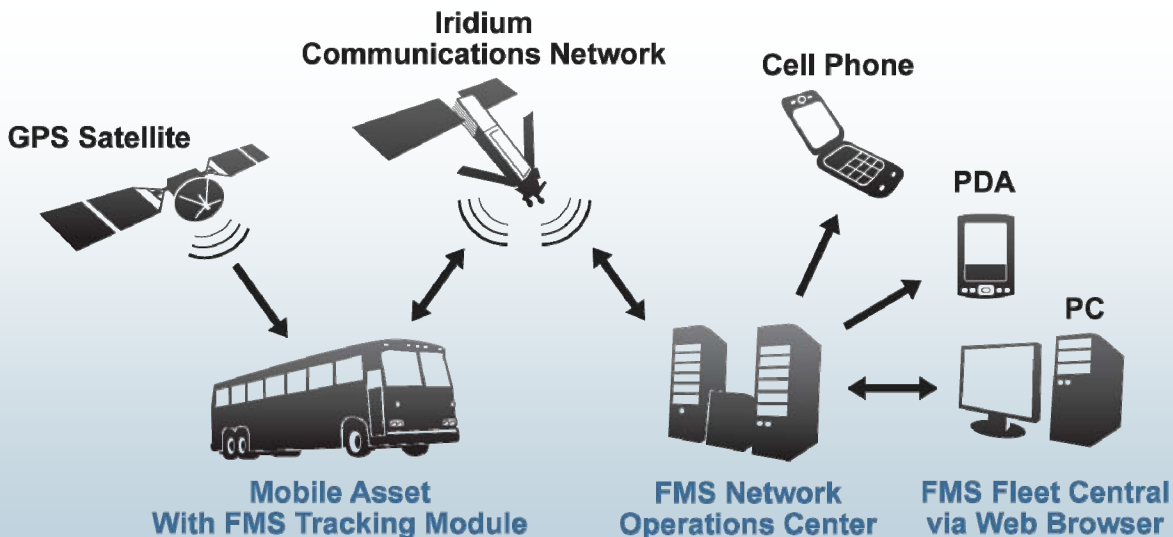

With about 4,500 vehicles operating nationwide, including in remote border areas, the U.S. Department of Homeland Security (DHS) is well versed in the challenges of monitoring and maintaining a large government fleet in real-time.

"The biggest thing is officer safety and detainee safety, but with the kind of money we spend every year on fuel and maintenance, the potential for saving money is huge." **-Charles Welke, DRO Program Analyst**

Benefits provided by satellite-based tracking and resource management include:

- » Improved safety and security of drivers and assets
- » Enhanced policy compliance and driver performance
- » Lower operational costs through fuel savings
- » Increased fleet efficiency through asset optimization
- » Superior asset management based on real-time data
- » Global satellite coverage ensures accurate tracking at all times and locations

The U.S. Office of Detention and Removal (DRO) serves as the primary enforcement arm of U.S. Immigration and Customs Enforcement (ICE), and is charged with ensuring the safe and fair removal of unauthorized aliens. The FMS system provides DRO with constant situational awareness of vehicles and personnel, as well as detainees transported from one location to another.

Fleet Management Solutions, Inc. is a Small Business.

FMS Provides Safety and Security to Government Fleets Using GPS Fleet Tracking

Fleet Management Solutions, Inc. (FMS) provides GPS fleet tracking with 100% global coverage and two-way satellite communications. FMS manufactures rugged and reliable on-board equipment and web-based mapping and reporting tools. FMS clients improve asset utilization, safety, and productivity while reducing theft and operations costs. FMS is a total solution provider.

Government Customers and Contractors

FMS Technical Support & Professional Services

Client satisfaction, results and continuous return on investment begin with quality training and installation support.

FMS works closely with every client to ensure system installation and deployment are complete and on schedule.

Real-Time Data From Anywhere, Anytime

FMS tracking modules maintain continuous GPS location, direction and speed information and combine that with vehicle performance data for complete mobile resource management. Fleet information is delivered from the vehicle via satellite, ensuring data delivery without need for cell towers and regardless of land geography. Data is received, stored and analyzed at the FMS network operations center and is accessed by clients from the FMS hosted application, Fleet Central.
